

Donaghys Alert Tail Paint G2

Alert Tail Paint G2 is the end result of a research and development programme carried out in order to produce new generation performance aerosol tail paints. Alert G2 offers an improved formulation for guaranteed performance to improve mating management without irritation to cows.

- Super bright colours, available in blue, green, orange, red and yellow, making it highly visible
- Long lasting paint with outstanding performance in both wet and dry conditions
- Easy to hold non-slip 500ml can
- Used to enable better mating management and a concentrated calving pattern
- Made in New Zealand

Directions for Use

- Shake can well
- Used to accurately detect cows in heat (oestrus activity) within a herd
- Tail paint the herd four weeks prior to the start of mating
- Record cows that have rubbed or broken paint as they would have cycled
- After three weeks vet check cows that have not cycled
- Re-apply tail paint at the start of mating with a second colour
- Check the paint for rubbing or cracking every 24 hours
- Cows with rubbed or broken paint have been on heat within the past 24 hours and are ready for insemination
- Re-apply the tail paint 12 hours post insemination with a third colour
- If the third application of tail paint is rubbed or broken, the cow has returned to heat and failed to conceive
